

Safer and longer-lasting poles

Protect your assets with **POLESAVER™**

- Prevent ground rot
- Easy two minute installation
- Apply before or during pole installation
- Retrofit to existing poles
- Installed cost less than 2% of pole
- Helps retain pole treatment at ground level
- Compatible with all types of testing

Using Polesaver sleeves to prevent ground rot is a safe and simple economic way of extending the lifetime of treated soft wood and hardwood poles. Polesaver patented sleeves are non-toxic and quickly and easily applied to the treated poles using heat. Polesaver sleeves can be used on both new poles and retrofitted to sound poles in service providing a long lasting, tough and durable barrier to the causes of ground rot and decay.

The unique composite construction means Polesaver sleeves are also used as a corrosion inhibitor on steel posts, poles & lamp standards to prevent in ground corrosion and rust. This can significantly extend steel pole lifespan especially in corrosive soil types. NZI is the agent for Polesaver and Postsaver so contact us now for your information pack.

- Sleeves quickly and easily “heat applied” at your depot or on site
- Inner liner melts
- Outer sleeve shrinks down tightly on the pole
- On cooling the sleeve forms a tough dual layer barrier at the ground line
- Apply with a blow torch in 1 to 2 minutes per pole.
