

## NETWORK UPDATE NOVEMBER 2011

Positive news.

Effective October 2011, New Zealand Insulators and Korean polymer insulator manufacturer DTR have joined forces with an agency distribution agreement for DTR product in New Zealand.

An established global polymer brand, DTR offer a range of deadends, surge arrestors, line posts, station posts, standoffs and EDO cutouts. NZI has DTR product in stock now, in both Auckland and Temuka.

Samples, drawings and type test certificates are available for all DTR products, and we invite NZ Networks to contact David, Dan or Ian for a price offer.

An interim DTR launch brochure is now downloadable from [nzinsulators.co.nz](http://nzinsulators.co.nz) and the full DTR product range will be showcased in NZI's updated 2012 Catalogue, to be released 16 January.

You'll see in our 2012 Catalogue that we are upgrading to a new range of spindles (for pin-type insulators) being offered by NZI.

**AX** Nine different spindles under the AX brand, all provided with stud hardware including – flat washer, spring washer, full nut and half (lock) nut.

AX Spindles feature hex fittings, are supplied in wooden boxes, and are made to exacting NZI specifications.

The new porcelain NZI 11kV Line Post insulator has been very well received.

Made in Temuka (with the cap made in Auckland by Masport) our NZI Class 1 Line Post has a cantilever strength of 10kN, radio silent glaze, a grunty 60x60x6mm flat washer, along with spring washer/full nut/half nut. The 160mm stud can be provided at different lengths on specific request.

NZI's product is lighter (5.0kg) but stronger than imported posts offered in the market, comes fully assembled 3 per wooden box, 144 per pallet and is in stock now in both NZI Auckland and NZI Temuka.

In January this year we took the decision to bring the manufacture of NZI K07 Fuseholders back to New Zealand. In fact from here on – any product carrying the NZI badge means it's made in Temuka.

Nine different configurations, superb quality guaranteed – the NZI K07 is an industry stalwart, see page 29 of our 2011 Catalogue. When the import prices start to inflate (and they will), we'll be ready with competitive Kiwi product – the NZI K07 Fuseholder included.

In January's Network Update we'll have news about an NZI Auckland Warehouse, our new porcelain recycling programme and a range of NZI clamp-top Line Posts.
