

MV NETWORK UPDATE SEPTEMBER 2012

Positive news.

Our new range of 33kV posts has had great support – vertical tie top posts across the North Island, vertical and horizontal posts in the South.

The NZI 33kV vertical clamp top line post (pictured) clamps a conductor diameter range of 10-38mm and cantilever strength is 13kN.

In conjunction with Fulton Industries (Gosford), we have developed a wedge clamp.

One-size-fits-all 25-70mm² conductor range, gunmetal construction with 304 stainless bolts.

56mm length, 950g weight, 25/box. Download the drawing (595-A4) from the Fulton section on nzinsulators.co.nz.

Ask one of us to quote this item (part number 524107).

From 5A to 100A, NZI stocks genuine Cooper Bussmann KR85 House Service fuselinks.

22x57mm ferrule format. 415V, 33kV breaking capacity, 20/box. To BS1361.

DTR have developed an all-stainless polymer EDO for our corrosive New Zealand conditions, and we are now commencing the process of sampling, approval evaluations and discussions with interested Networks.

The 27kV 150BIL 100A stainless-fittings polymer EDO (pictured) has creepage of 580mm and exactly the same 382mm bracket length as is accepted in this market.

DTR manufacture these cutouts for Kepco, the single distribution network in South Korea. They intend to be competitive and flexible to gain an EDO footing in the New Zealand market.

Let's finish with a FREEBIE!

Any NZ Network or contractor to a NZ Network can request a free sample of NZI's new AX 70kN one-size-fits-all aluminium Clevis Thimble (536342). Internal dimensions of 30Wx55Hmm means even the largest preform fits with ease.

Email mandy.gilkison@nzinsulators.co.nz and Mandy will shoot you a complimentary sample. Conditions apply.
