

When it comes to securing electricity supply through New Zealand's overhead power lines, the humble porcelain insulator has proved to be the most reliable means of protection for many generations.

Manufactured in Temuka, South Canterbury by New Zealand Insulators (NZI), the quality of the local product is the result of 98+ years of manufacturing expertise built up by the company. All NZI branded porcelain insulators are made from the unique Kakahu blend of clays, sands and mixing agents sourced direct from NZI's "owned and operated" quarry.

All NZI insulators are manufactured with a glaze that helps to prevent flash-overs by promoting self-cleaning and also enhances mechanical strength. All medium voltage insulators are supplied standard with the addition of our high specification "Blue Radio Silence" glaze to assist the reduction in radio interference.

NZI insulators have continued to build a reputation for reliability and durability since 1924.

NEW ZEALAND INSULATORS UPDATED 2022 CATALOGUE

- > New products
- > Updated and increased range

NZI continues to re-invest in the Temuka factory, with a continued focus on ISO9001-certified quality manufacturing systems and our expanded agency product range which NZI distributes from our globally based manufacturers/suppliers. Staff numbers continue to increase year on year as we prioritise making customers the focus of our business.

The wisdom of choosing performance and quality over price is supported by international research which shows that the price of porcelain insulators is typically only 3% to 5% of the cost of installing a new overhead line. However 90% of the faults likely to occur on that line will be caused by insulator failure. The only way to minimise risk and cost is to utilise insulators with the highest quality manufacturing practices and the highest quality glazing. NZI provides this manufacturing surety and more by offering a 25-year warranty on our NZI manufactured porcelain.

New Zealand Insulators proudly made in Temuka, South Canterbury, New Zealand.
