

LONG AND CRAWFORD SWITCHGEAR

New Zealand Insulators announced the sole New Zealand, Australia, Pacific Island and Malaysia agency for the UK based company Long Controls in mid-2018 (seems like a long time ago). Since then we have been busy assisting network asset managers and contractors to coordinate components and with training and refurbishment of the ever-reliable Long and Crawford Switchgear.

The LCL/NZI Service kits for the Long and Crawford Switchgear range makes the in-situ servicing of the Long and Crawford switch a basic 5-8 hour regime which, once completed, can add twenty years to the service life of the switch. This of course removes the prohibitive cost of switch replacement.

Service kits are available for most models and these include only OEM (Original Equipment Manufacturer) parts. This provides the confidence of longevity of service.

NZI can also coordinate training for technicians on how to efficiently complete the service work. We use UK based trainers who have decades of experience and service knowledge.

The extent of the servicing and part replacement completed can be varied depending on the age and location of the units. Kits can include all internal parts, bushings, gaskets, and even replacement site glasses and labels.

With the wide range and varied selection of Ring Main Units (RMUs) and Fused Switches in New Zealand, all in varying degrees of reliability and longevity, none can match the service life and ongoing reliability of the Long and Crawford units.

A service regime that adds at least twenty years to the operational life is an economical opportunity that needs to be considered. To find out more about our service kits or training, please contact our sales team on the numbers below.

New Zealand Insulators proudly made in Temuka, South Canterbury, New Zealand.
